Comparison of Heatmapper to other freely available heat map tools. Note that more than one column of numeric values can be included. In contrast to data-matrix heat mapping tools, software for image-based heat maps such as those with latitude and longitude data or choropleth geopolitical data often have very few customizable features.

Each of Heatmapper's five heat map types share the same general page layout, with a sidebar on the left for navigation and a main content area on the right. In this regard we believe Heatmapper should be much easier, much faster and much more appealing to a much wider community of scientists, educators and students. Dendrogram plots are generated using the gg dendro package. Image Overlay Heat Maps allow users to overlay quantitative data on custom images, such as cell, plant, animal or anatomical images. Colour customizations use a widget called `jsColourR` to allow different colors for each data point. Heatmapper is quite unique in terms of its broad capabilities, interactivity and web accessibility, it tends to be a bit slower than most stand-alone programs. The microarray explorer tool for data mining of cDNA microarrays:
