The system of care reported here was not integrated from inpatient to outpatient services, unlike some systems. The findings indicated that therapists met their clients in both private and community outpatient settings. Institutional review board approval was obtained for the original study. While there are hundreds of empirical studies in the literature focusing on non-suicidal self-harm, the system of care reported here was not integrated from inpatient to outpatient services, unlike some systems. Factors affecting treatment attendance What factors might be associated with poor treatment attendance? Weekly visits were the standard mode of treatment, with session frequency ranging from once to three times per week. Factors that include depression and self-esteem issues as the most common, with suicidal thinking and cutting the next most common.
