From the viewpoint of an "industrial" this book is most
welcome, as one of the most significant demonstrations of the
maturity of Prolog. Logic programming is a .

Useful because character strings in Prolog are lists of
character codes. Set a column boundary at position N where N
defaults to the current position. In addition, they allow for
an arbitrary named compound term where each of the arguments
is a term from the list .

Given an environment variable E this predicate unifies the
second argument S with its value. Useful because character
strings in Prolog are lists of character codes.

This should only be used if there is no further use of the old value of the replaced

predicate should not be used if Socket has given rise to a
stream, e. This allows GNU Prolog to produce a native stand
alone executable from a Prolog source similarly to what does a
C compiler from a C program.
