Introduction. It is well known that cardiovascular disease (CVD) is the leading cause of death in the developed world and is rapidly becoming the leading cause .

Estimates of long-term survival are required to adequately assess the variety of health and social services required by those with congenital heart disease.

"Cardiac arrest survival rates are unacceptably low," said Robert Graham, A heart attack occurs when blood flow to an area of the heart is.

### **Survival following a diagnosis of heart failure in primary care | Family Practice | Oxford Academic**

There are two very good reasons you should know how to survive a heart attack. First, odds are very high that either you or someone you love will suffer from a.

Estimates of long-term survival are required to adequately assess the variety of health and social services required by those with congenital heart disease.

The dataset extracted from THIN database included Survival of the Heart persons aged 45 years and over, registered at a practice for at least 12 months during the study period. The calibration slope helped in estimating the ability of model for survival probability prediction. Heart failure is the state in which muscles in the heart wall get fade and enlarge, limiting heart pumping of blood.

Heart failure is a chronic condition which is often insidious in onset and can be fatal. The outlook for participants in community screening studies is less bleak. Identifying the predictors of prolonged survival could guide the selection of candidates for the low number of available donors.

The outlook for participants in community screening studies is less bleak. This study was focused on survival analysis of heart failure patients who were admitted to Institute of Cardiology and Allied hospital Faisalabad-Pakistan during April-December
